Some design patterns are built into Python, so we use them even without knowing. Other patterns are not needed due of the nature of the language. For example, Factory is a structural Python design pattern aimed at creating new objects, hiding the instantiation logic from the user. But creation of objects in Python is dynamic by design, so additions like Factory are not necessary.

In this work we concentrate on the latter two categories: design patterns as they are described in what is known as the GANG OF FOUR-book (GOF for short) and Python language idioms. The patterns are not only microarchitectural models but also useful as a common design vocabulary among software engineers. The overall architecture of the system and related design decisions can be explained by giving a set of patterns used. While new patterns do emerge the GOF still remains as the definite ...
