The quantum mechanics, however, discards this assumption, and asserts instead that the position of a photon has meaning only when the experiment includes a position determination. Moreover, this part of the experiment will affect the remainder of the experiment and cannot be considered separately. Thus from the point of view of quantum mechanics, the question asked in the last paragraph is ...

In quantum mechanics the fundamental entity is the 'state vector', an element of a linear vector space. Measurements are explicitly modelled through properties of certain linear operators in the space. The equation of motion can be written as a differential equation for the state vector, the Schrödinger Equation.
