## Specific Heat Calculations Worksheet With Answers

Thank you very much for reading specific heat calculations worksheet with answers. As you may know, people have look numerous times for their favorite novels like this specific heat calculations worksheet with answers, but end up in infectious downloads.

Rather than enjoying a good book with a cup of coffee in the afternoon, instead they juggled with some infectious virus inside their desktop computer.

specific heat calculations worksheet with answers is available in our book collection an online access to it is set as public so you can get it

Calculate specific heat as  $c = Q / (m \Delta T)$ . In our example, it will be equal to  $c = -63,000 \text{ J} / (5 \text{ kg} \cdot -3 \text{ K}) = 4,200 \text{ J} / (\text{kg} \cdot \text{K})$ . This is the typical heat capacity of water. If you have problems with the units, feel free to use our temperature conversion or weight conversion calculators.
